

VERTICAL STRAPPING SYSTEM

Automatic system for vertical strapping developed to carry out a strapping application for all types of products, guaranteeing total stability of the load.

1 | MAXIMUM PRODUCTION:
UP TO 60 PALLETS/HOUR

2 | PERSONALIZATION: SUITABLE
FOR VARIOUS
PALLET SIZES

3 | STABILITY
OF THE LOAD

4 | TITAN STRAPPING HEAD
Welding for resistance

5 | FOR ALL SECTORS

INNOVA SUPPORT

It is our work philosophy to achieve the greatest client satisfaction wherever you are, offering a helpful and efficient technical assistance service.

PROCESS OF VERTICAL STRAPPING

etherna By innova

Corner protection applicator

Lowering of head and positioning of fork

Vertical strapping

MAXIMUM GRIP AND PROTECTION

CORNER PROTECTION APPLICATOR

Cardboard corner protection application system between the load and the strap, offering maximum protection for the product.

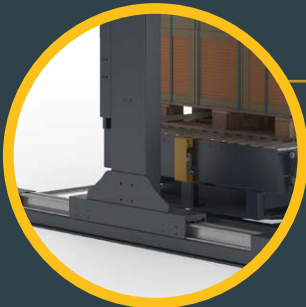

ROTATING PLATFORM

90° rotating system that permits strapping in 1 or 2 directions for better grip on the load.

SPACE SAVING IN THE FACTORY

MOVING

Lateral movement system of the strapping machine permits the undertaking of several strapping processes without moving the load, saving space on the production line.

FOLDING FORK

New design to save space in the factory. Flexible fork structure in vertical position before strapping.
